Becker Acroma

Becker Acroma brings 140 years of experience in the global wood finishing business to your finishing needs.

Becker Acroma's range of product solutions covers the spectrum of home and office furniture, kitchen and bath, joinery and board applications.

Surely the only choice

Featured products

Innovat Clear

Innovat Clear, a post-catalyzed clear coating with high solids, is easy to use and provides a high build.

It can be used as a self-sealing system with excellent clarity, and is safe for use over all shades of stains, even pastels and whites.

With its HAPs-compliant, fast dry, non-yellowing formulation, Innovat Clear provides a moisture- and chemical-resistant coating. Its elasticity allows the coating to expand and contract with the wood substrates.

Hydra Stain Program

Becker Acroma is leading the transition from solvent to waterborne solutions, providing the same results as conventional techniques with environmentally compliant solutions.

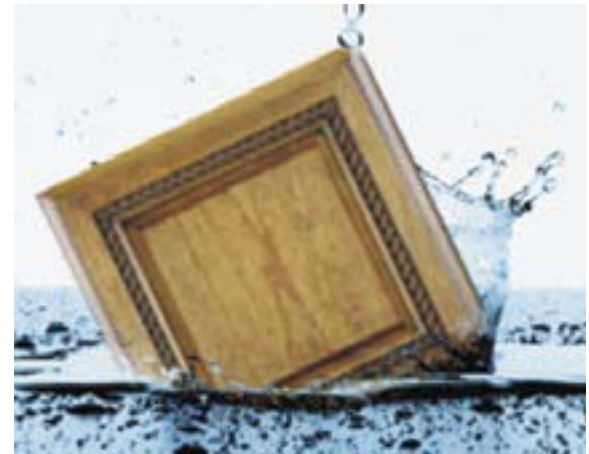

The results are reduced harmful emissions, minimized risk of skin allergies and irritations, safer handling and less hassle.

The new Hydra Stain program is the most advanced waterborne stain program on the market, with both spray and spray-and-wipe stains in 12 deep and rich colours.

Both stain types bring excellent grain definition with minimal grain raising. Deep, dark, rich colours are uniform even on hard-to-stain species like maple.

Hydra Stain is a marked improvement over solvent-based stains, with low VOCs.

Hydra Stain is surely the only choice.
